

Area 9 – Hotel Street

Hotel St. includes the construction of a flood defence embankment and wall along the left bank of the River Barrow.

The embankment will be circa 240m long with a maximum height of 1.25m above ground level and will be grass seeded.

To preserve the marsh/wetland towards the east, the embankment will merge into a concrete flood wall 38m long and maximum 1.5m high to serve protection against 1% AEP Flood Events.
