

Area 10 - Tinnahinch Quay

Tinnahinch Quay includes the construction of a flood defence wall from Graiguenamanagh Bridge to Tinnahinch Car Park at the mill channel. The defence consists of a reinforced concrete flood wall with sheet piles for seepage cut-off and hinged flood gates along the Quay to maintain access. Most of the wall will be approx. 0.8m high, but it will be up to 1.2m high at Tinnahinch carpark. The hinged flood gates will default in an open position.

Improved and safer pedestrian movement is proposed from the bridge and new pedestrian crossing.

The amenity pathway along The Quay will form part of the regional hiking trail, The Barrow Way.
